The Power In Our Product

Microsoft Power BI is a cloud-based business intelligence tool that allows you to analyse your data through interactive reports and visualizations. With real-time access to insights, you can optimize your business operations and stay ahead of the competition.

About Us

OPC specializes in business intelligence solutions utilizing the Microsoft Power Platform, offering data warehousing, training, and consulting services. Having been involved in the Automotive IT space since the earliest of DMS system days, we have a deep understanding of the business processes and Technology requirements of the Automotive trade.

Services

Business Intelligence

OPC is a leading provider of business intelligence solutions for top automotive retail and importer organizations. Our cutting-edge Microsoft Power Platform enables us to deliver the most advanced Power BI solutions available in the industry. Our expertise in the Automotive Retail and Importer sector allows us to offer the latest and most sophisticated technology.

Conversion**

**Multi Platform
Integration**

Our **integrated BI solution** has been specifically designed for **automotive retail** and **import organisations**.

It allows for real-time data analysis and DMS integrations that will optimise your business operations and allows you to access your data from the comfort of your couch using your laptop or mobile device.

EXCLUSIVE FEATURE

Recon your floorplan through Robotic Process Automation (RPA)

RPA can help you **reconcile your Floorplan account** with stock, sales, and vehicle debtors. It provides **real-time settlement, interest calculation, and exceptions reporting**.

This integration improves the **efficiency** of your finance and admin process and significantly reduces your **risk exposure**.

BENEFITS OF ROBOTIC PROCESS AUTOMATION

Prevent Soot fees by insuring real time settlement of vehicles with activated warranties.

Manage cashflows with quantum precision between floorplan payable and vehicle Debtors.

Understand the "Real Cost" of every unit with automated interest calculations.

With the integration of RPA, you can easily keep track of the number of days remaining before any vehicle in your stock list starts accumulating interest.

Exceptions reporting that enables you to prioritise your efforts and allocate resources more efficiently.

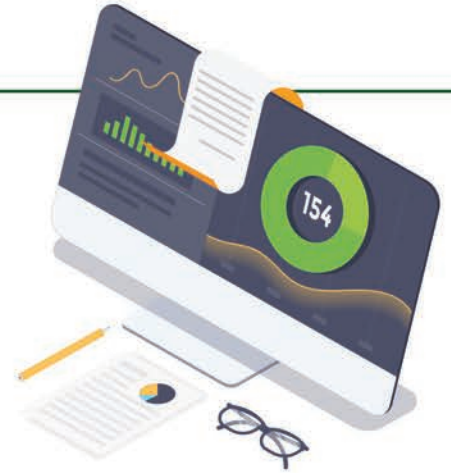

Access detailed drill downs that will increase your operational transparency & improve decision making.

WHAT CAN WE OFFER YOU?

We offer **customised data analysis, reporting, predictive modelling, and visualisation** to fit your unique needs.

Provide a **single consolidated view** of important data from all your **different systems**.

Budget & target performance tracking for your team.

Analyze your **business' historical performance** and discover **trends and actionable insights**.

Our **RPA integrations** enable us to deliver **industry first automations** that cut to the heart of your admin operations.

Our **rapid deployment** team enables go-live from as little as **two weeks**.
