

Power BI Developers Bootcamp

Two Day training course to get you started
presented by certified professionals

Course overview

The course is designed to assist organizations in getting started on the Power BI platform. It requires no coding or technical experience. It is suitable for Data analysts, software developers and Business executives alike.

Your business will immediately start with Power BI and Fabric, and you will have your first reports running in the service on the first day.

- Build your own reports
- Connect your own data sources
- Setup user access
- Share reports with colleagues

Connect Data sources

Learn how to connect to hundreds of data sources

Transform your data

Learn how to use Power Query

Create Reports

Learn how to create beautiful reports.

Publish and Share

Learn how to publish and share your reports

Are you hoping to become less dependent on professional developers?

This bootcamp training experience is presented with the business in mind that wishes to take more control over its own data estate and develop reports in house. You might be employing your own data analysts and are wishing to retrain them on Power BI.

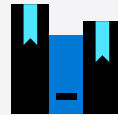

You might have heard of Power BI and think you can kick start the business adoption of this outstanding technology.

This course is for you and your staff.

Power BI & Fabric Overview

- Data and analytics
- Power BI Service and Fabric
- Back-end data engineering and your business
- What does it mean to keep data in tenant?

Develop

- Connect to multiple data sources
- Transform data through Power Query
- Model data
- Create beautiful visuals

Secure sharing and publishing

- Power BI Service
- Row level Security
- Sharing and user access
- Data refresh

Professionally designed curriculum

The team at One Power Cloud are bona fide professional Power BI data analyst developers and power platform activators. They have a track record in industry and have delivered some of the most advanced data analytics models from Operational reporting models to Financial reporting platforms. Sign up today for this personalized training experience. We come to you.

Connect Multiple Data sources

- Import from Spreadsheet local machine.
- Import from text local machine.
- Import from SharePoint
- Import from Database – MySQL/SQL
- Import from Cloud sources. Data lake.
- Connect to Web pages.
- And more

Power Query & Data modelling

- What is Power Query?
- Data Transformation
- Common functions. Add columns, Add Tables
- Advanced editor – M-query
- Modelling – Manage relationships

DAX & Visuals

- What is DAX?
- Most Common DAX Expressions
- DAX Cheat Sheets
- What is a visual
- Standard Visuals, Get more visuals
- Tables and Charts
- Slicers, filters, and field parameters

Publish & Share

- Row level security
- User access
- Workspaces
- Data refreshes
- Sharing in tenant
- Power BI Functionality overview
- Scorecards
- Applications
- Sharing external B2B

Power BI Tenant Admin overview

- Admin Portal
- Power BI Setting
- Embedded options
- Semantic Models
- Workbooks
- Dataflows
- DataMart
- Group Storage
- Monitoring Hub

We can help you harness the technology of the Power Platform

Obviously, managing and analyzing large data lakes require enormous computing and storage resources, as well as expertise. Your current data center is configured for day-to-day operations, not data analytics, which is why we look to cloud services. Cloud scale analytics leverages the power of the cloud services provided by Microsoft Azure and its ecosystem of cloud applications and systems.

The right technology partner is here to make this happen. As an expert in Microsoft Azure, certified Power BI developers and experienced, expert solutions providers to the Automotive market, we possess in-depth knowledge and experience in implementing cloud scale analytics solutions that help transform the vast quantities of fragmented data that exist in your business into valuable BI.

We take a three-phased approach:

1. Envision

Find out what opportunities are possible for your organization when you transform your data estate to unlock its full value.

2. Experiment and learn

Begin to develop a data culture and build trust through a smaller-scale proof of concept that delivers immediate data value.

3. Build and scale

Get aligned with your organization's leaders and data stewards on the business value you'll drive over time, map your current and future data estate, and establish a network of transformation champions.

By partnering with the right data, analytics and Microsoft experts, organizations can successfully navigate the complex journey of AI adoption in the Automotive industry.

Work with us to grow your D&A program

Trust us to empower your team with the necessary skills, experience, and expertise that will allow you to take advantage of the power of cloud scale analytics.

We can help you put together the right solutions for your unified analytics, so you get the best parts of data mesh, data fabric, and data hub. With extensive expertise in Microsoft technologies, we can help you develop a solution architecture that works effortlessly for your business.

We provide a one-stop-shop for data integration, data engineering, real-time analytics and business intelligence needs. With this solution, you will establish a unified source of truth by bringing together all analytics workloads in a lake-first foundation. Your teams will also be able to reduce the time and effort taken to uncover impactful insights through democratized access to data.

And through it all, you won't compromise the privacy and security of your data.

“By 2024, 75% of organizations will have established a centralized data and analytics (D&A) centre of excellence to support federated D&A initiatives and prevent enterprise failure.” – Gartner
